

28 34. (Amended) A method for the production of an IgSF domain [of] or fragment [of] according to claim 28 comprising culturing a host cell of claim 27 and isolating said domain or fragment.

29 35. An IgSF domain or fragment, or a fusion protein comprising an IgSF domain or fragment, encoded by a vector according to claim 26.

36. An IgSF domain or fragment, or a fusion protein comprising an IgSF domain or fragment produced by a host cell according to claim 27.

REMARKS

65510-0622260

Applicants have amended the specification to set forth a priority claim under 35 U.S.C. § 120 to an earlier filed application. Applicants have amended the specification to recite the term "Description of Figures" and have amended the descriptions to comply with United States Patent and Trademark Office practice. Applicants have also amended the claims to conform with United States Patent and Trademark Office practice. None of these amendments adds new matter. For the convenience of the Examining Division, applicants have formatted the application to include line numbering. Applicants have amended the claims to remove multiple dependent claims that are dependent on claims with multiple dependencies. Applicants request entry of the amendments and allowance of the claims.
